2016-06-07 Retrospective

Date	07 Jun 2016
Participants	Leonid Marushevskiy Oleg Korneychuk Alexander Sankin Alexander Serbin Dmitry Rudenko Serge Redchuk Dariia Iarmuratii Yevhen Sirotin Oleksandr Nikitin Angelina Shcherbatiuk Dmytro Balym Oleksander Kuznetsov

Retrospective

What did we do well?

- Was able to increase team velocity and close more story points compared to the previous sprint
- Deployment engineers were able to setup infrastructure in Amazon

What should we have done better?

- Took a long time for approval to register an Amazon account. Next time, need to find a more effective way to solve this type of request.
- Was not able to finish responsive UI in the sprint. Need to be more careful on estimates in next sprint.
- Some stories combine several features and can be separated into more granular stories.
- This sprint we had a small imbalance between front-end development and back-end development due to vacation of one front-end developer. Front-end developers were not able to deliver enough artifacts for back-end development.

Actions

- [ ] Leonid Marushevskiy make sure we have enough front end developer resources to maintain the right balance in next sprints
