04. Maxim - 05/31/2016 - UI feedback and usability

As a plain user who has never seen the application.

Some IT background. No Foster family connection.

Level of input quality - **moderate.**

2 Axure versions are compared:

#2 http://2cm36s.axshare.com/login.html (password: 123654789)

and

#4 http://7wxxot.axshare.com/login.html (password: 123654789)

Scenario is taken from Usability testing

User output:

Navigation

Prototype #2 navigation is completely unclear - user failed to discover it by himself.

Prototype #4 navigation is much better. Functional (Inbox and Facilities) is separated from Non-Functional (Profile and Logout).

Usability

Both prototypes come without any kind of validation. It is easy to enter incorrect data. He thinks that both prototypes are in the very early stages - no real feedback from this point.

Facilities

Look the same - no big difference. Need to improve the prototype with more deep scenarios.

Inbox

Attachment preview looks better in #2 vs #4.
